

Experience a sound quality
never heard before, by using
3 times bigger memory size

**The superb sound library
ever created
for a musical instrument**

only on **D E X I B E L L**

compatible with all VIVO and COMBO
using the latest AQUAVIVA *OS 4.05 (*)*

- (*) Additional features compared to the previous version
- Compatibility with new Platinum library
 - Added Import / Export MIDI Set on USB Memory
 - Added Wheel setting in Memory or Global mode (only for S7 & S3)

PLATINUM Library

DEXIBELL, after listening to requests from musicians, has created a 'special' superior quality sound library called "PLATINUM".

These "PLATINUM" sounds are 3 times the memory size of standard DEXIBELL pre-loaded sounds. So, considering that standard DEXIBELL sounds are already top quality and industry-leading, the PLATINUM sounds (created by a high-level recording process and editing without any compromises) are simply on another level!

To play a "PLATINUM" sound offers the musician a unique experience that is only possible with a DEXIBELL instrument thanks to the 'T2L' technology utilising 24 bit and 48KHz sound quality.

The "PLATINUM" sounds can be loaded into ALL DEXIBELL instruments by simply creating additional space in the internal memory by 'parking' unused sounds into the flash rom, from where they can be reloaded at any time.

Available now

- American Grand Platinum (USA PLT)
- German Grand Platinum (German PLT)
- Japan Grand Platinum (Japan PLT)

Available in the fall season

- Italian Grand Platinum (Italian PLT)
