DEXIBELL
VIVO OS 04.16

Additional features compared to the previous version

1) **USB Audio works also with WINDOWS**

   USB Computer Port can send/receive digital AUDIO IN/OUT simultaneously with MIDI in all computers equipped with WINDOWS.
   <u>(MAC OSX and LINUX already worked in the previous software version).</u>

   Using the instrument with your Computer
   If you use a A → B type USB cable (commercially available) to connect the USB COMPUTER port of your instrument to your computer's USB connector, you can record and play audio or/and MIDI data by your MIDI software (DAW software).
   The instrument can transmit/receive audio streaming at 24 bit 48 Khz.

2) **Delay Time up to 1000ms**

   On all DELAY effects, the time value of Delay R, Delay L, Delay C parameters has been increased up to 1000ms.

3) **"USA Rev PLT" and "Italian Rev PLT" has been added to the internal tone list**

4) **Several bugs fixed**
